Hygiene and disinfection plan

according to BioStoffV §11 und GenTSV §17

Valid for:

Responsible Project Manager:

Status:

Safety level 2 laboratories, according to GenTSV and protection level 2, according to BioStoffV Ute Hoffmann

2025

What	With what	when	How	Who
Hands Washing	Water and Soap (Baktolin)	» before starting work» after finishing work» after going to the toilet» after contamination	Apply 2-3 drops of hand soap from the wall dispenser to hands. Foam with lukewarm water and distribute evenly over hands (especially the finger gaps, finger side edges, nail folds, fingertips, thumbs and wris). Then dry hands with paper towels.	Every authorized employee
Hygenic disinfection	Sterillium classic pure (Wall dispenser)	 after finishing the work or before leaving the lab in case of direct contact with infectious material before wearing gloves in case of working with microbiological material 	Apply 2-3 drops of Sterillium from wall dispenser into dry hands and rub in for 30 s (especially the finger gaps, finger side edges, nail folds, fingertips, thumbs and wrists). Dry for as long as necessary.	
Skin protection and care	 Prolinde Skin protection cream sensitive (blue) Prolinde care cream 	» before work» before long-term usage of gloves» end of the day	Apply a cherry pit-sized amount to the back of the hand and massage in carefully. Apply a cherry pit-sized amount to the back of the hand and massage in carefully.	
	sensitive (purple)	» before a longer break		
Lab coats (Clothing)	•Steam sterilization (Autoclaving)	» every 2nd week » after contamination	Transfer lab coats into an autoclave bag, close and place it in a bin for S2 waste in room 3.30. Transfer coats (clothing) to an empty autoclave bag and place it in the media kitchen (R.: 2.29/30) for autoclaving.	Every authorized employee
Worktops and surfaces	OxyfoamS	 after termination of work or before leaving the laboratory after contamination 	Apply directly to the surface with the spray bottle or with a paper tissue and wipe generously over the working area. Incubate for 60 minutes. Absorb with a paper tissue and wipe affected areas with OxifoamS for disinfection. Incubate for 60 minutes.	Every authorized employee

Devices (Refrigerators, Centrifuges, water baths etc.)	OxyfoamS	» after contamination» thorough cleaning, at least once a year	Absorb (liquids) with paper tissue and through it into autoclave waste. Wipe affected areas/instruments with OxyfoamS for disinfection. Incubate for 60 minutes. Wipe left-overs with a paper tissue and through it into autoclave waste. Disinfect interiors and surfaces with a OxyfoamS soaked paper tissue. Incubate for 60 minutes.	Every authorized employee
Sterile benches (Microbiological safety bench)	• OxyfoamS	 after termination of work or before leaving the laboratory once a month and after contamination once a year 	Apply directly to the surface with the spout bottle or with a paper tissue and wipe generously over the working area esp. soiled areas. Incubate for 60 minutes. Clean the whole interior of the sterile bench with a OxifoamS soaked paper tissue. Incubate for 60 minutes. Remove base plates (if possible), wipe them with OxifoamS soaked paper tissue. Incubate for 60 minutes. Autoclave the base plates and change the filter.	Every authorized employee
Contaminated lab dish (Beakers, empty Culture bottles etc.)	OxifoamS	» after use, but only when S2 GVOs or S2 biomaterials were inside before	Apply OxifoamS directly to the surface with the spout bottle or with a paper tissue. Wipe it wet. Incubate for60 minutes.	Every authorized employee
Intruments ((forceps, scissors, glass spatula.)	Sekusept aktiv 7%	» before and after each usage	Bath the respective instruments in Sekusept aktiv 7% for at least 60 minutes and then rinse with sterile VE water.	Every authorized employee
Glass pipettes	Sekusept aktiv 7%	» after each usage	Incubate the pipettes in Sekusept aktiv 7% for at least 60 minutes. Cleaning takes place at the lab kitchen.	Every authorized employee
Incubators	OxisfoamS and hot sterilization (special program)	» once a month and after contaminationn	Absorb (liquids) with paper tissue and through it into autoclave waste. Clean the whole interior of the sterile bench with a OxifoamS soaked paper Incubate for 60 minutes. Start sterilization program.	Every authorized employee
Floor	OxifoamS	» after contamination	Absorb (liquids) with tissue and through it into autoclave waste. Subsequently apply B15 2% to the spot/surface. Incubate for 5 minutes. Wipe left-overs with a paper tissue and put into autoclave waste.	Every authorized employee
